Giving Shape to Ideas

# **DISCOVER WHAT ADVANCED SECURITY COULD DO FOR YOUR BUSINESS**

## **RETHINK SECURITY**

When you work with sensitive information, you need to know it is secure. Even when doing simple tasks such as printing or scanning documents, you could be leaving data open to theft. If you need to guarantee the safety of your data, you need a service that is comprehensive, offering protection and advanced security for both your network and your multifunctional office device. At Konica Minolta, our bizhub multifunctional devices come with industry-leading security built in. What's more with bizhub SECURE Platinum, we can tailor security features to your office needs. Whether you already have a Konica Minolta bizhub device or are considering purchasing one, we can activate bizhub SECURE Platinum features on-premises or prior to delivery, so you can work safe in the knowledge that your data is in good hands.

The bizhub SECURE Platinum service can be activated on any Konica Minolta bizhub multifunctional device, so no matter the size of your business you can operate safely and with the confidence that your data is secure. Once bizhub SECURE Platinum safeguards are in place, you can be sure your data will enjoy uncompromising security protection. Your bizhub multifunctional device in your network will be protected to ensure your data is more than just secure – they'll be bizhub SECURE!

# DATA – YOUR MOST VALUABLE & VULNERABLE BUSINESS ASSETS

## RETHINK SECURITY

Of all your business assets it is quite possible that your data is the most valuable – and most vulnerable. But securely safeguarding those assets could not be simpler: bizhub SECURE Platinum protects your documents, data and corporate information.

### KEY CONSIDERATIONS FOR YOUR bizhub NETWORK SECURITY

#### Data Protection

With bizhub SECURE Platinum, you receive a new, unique and secure password to protect your bizhub from attacks. Furthermore, your device can be protected via several encryption and overwriting methods, keeping the data passing through your bizhub safe. The encryption will also prevent data being read in the event of a security breach and protected by an extra password should anyone attempt to install the hard disk elsewhere.

#### Access control

In some office environments, your multifunctional device may be used by many people with varying levels of security clearance. bizhub SECURE Platinum allows you to activate user authentication and assign different levels of access to different users. You can also activate automatic log off for accounts, keeping your device safe from outside security risks.

#### Advanced network security

When you send information over your network, you need to know that it is only going to the destination you intend, and not being read by anyone else. By activating HTTPS network encryption with bizhub SECURE Platinum, you can guarantee your data is being communicated safely across your network.

#### Keep track

When you need to keep data secure, it is important to know that you can provide documentary evidence of what information is passing through your system. bizhub SECURE Platinum enables audit logs for your bizhub device, collecting a chronological account of activities in an audit trail.

KONICA MINOLTA
